

Water Weekly

For the week of 02/26/24

Water conditions

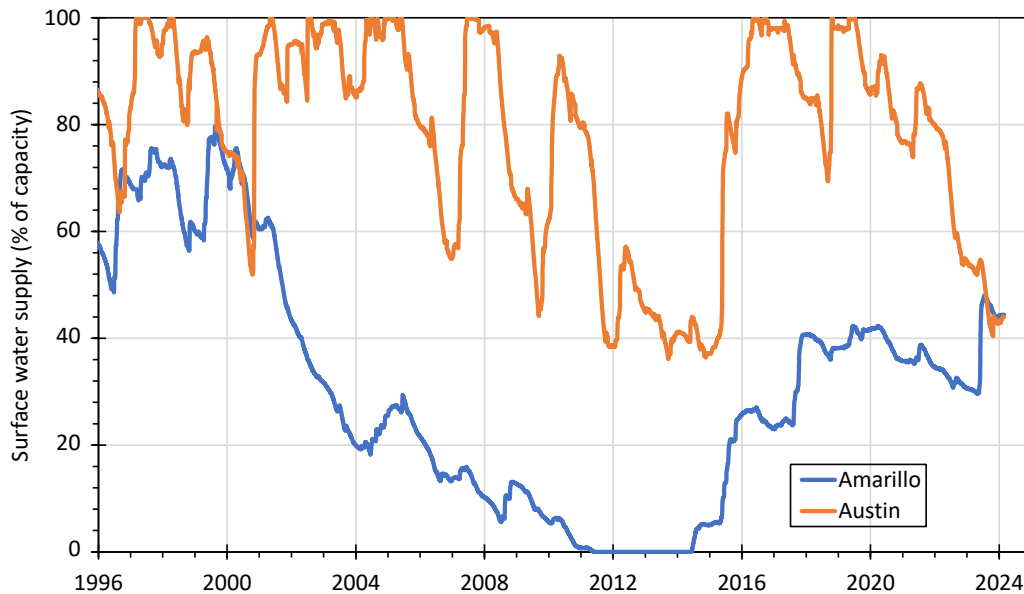

The latest drought map for conditions as of February 20 shows a few small areas of improvement in Central and South Texas in the last week, along with larger areas of degradation in West Texas. Overall, drought increased by two percentage points, the first weekly increase in five weeks.

Drought conditions

- ◆ 23% now
- ◆ 21% a week ago
- ◆ 44% three months ago
- ◆ 58% a year ago

Amarillo and Austin reservoirs

Data courtesy of Water Data for Texas

Ongoing drought conditions in Central Texas have reduced the contents of Austin's water supply reservoirs. Meanwhile, better conditions in the Panhandle have improved conditions for Amarillo. For the first time since 2000, Amarillo's surface water supply (44.4% of capacity) is doing better than Austin's (44%).
